

Acme Cloud Technical Support Guide

1.1 Service status

Live service status and incident history are published on the Acme Cloud status page. Check it first if many things stop working at once.

1.2 Basic troubleshooting

Clear the browser cache, update the app to the latest version, try another browser, disable browser extensions, and restart the app. These steps resolve most display and loading problems.

2.1 API error 401

Error 401 means the API key is invalid or expired. Generate a new key under Settings, Developer, API keys and update your application.

2.2 API error 429

Error 429 means the rate limit was exceeded. The limit is 100 requests per minute per key on paid plans and 60 requests per minute on the Free plan. Retry with exponential backoff.

2.3 API errors 500 and 503

Errors 500 and 503 are server-side. Check the status page and retry after a few minutes. If the error continues for more than 30 minutes, contact support and include the request ID.

3.1 Sync problems

If files do not sync, sign out and sign in again, confirm the app version is 4.2 or newer, and check your internet connection. A sync can take up to 10 minutes.

3.2 Supported platforms

Supported platforms are Windows 10 and newer, macOS 12 and newer, iOS 15 and newer, and Android 10 and newer. The latest two versions of Chrome, Firefox, Safari, and Edge are supported.

3.3 File uploads

The maximum upload size is 100 MB per file. Uploads fail if the file is larger or if the connection drops. Retry on a stable connection.

3.4 Integrations

Slack, Zapier, and Google Drive integrations are supported. If an integration stops working, disconnect it and authorize it again to refresh the token.

4.1 Support response times

First response targets are 1 hour for Critical issues such as outages, 4 hours for High, 1 business day for Medium, and 2 business days for Low priority tickets.

4.2 What to include in a report

Include the request ID, the time of the problem, screenshots, and your device and app version. This helps the team resolve the issue faster.
